

Introduction to Cloud and Serverless Development with AWS

Final Assignment, Part A – Student-Led Presentation.

As part of the final assignment, you will learn an AWS service on your own and teach it to the class. This task is based on self learning and peer teaching.

What You Need to Do

Group Work

- Work in groups of 3 students.
- Select one AWS service that:
 - Was not covered, or
 - Was only briefly mentioned during the course.

Choosing a Topic

- Choose a service from the predefined list provided in the course.
- All listed services are available in AWS Learner Lab, so you can run a live demo.
- If you want to choose a different service using a personal AWS account, get approval from me in advance.

Group Registration

- Register your group in Moodle.
- Use the AWS service name as the group name.

Presentation Details

- Presentations will take place during one of the the last 2 lessons of the semester.
- Everyone in the group must participate in the presentation.
- The presentation should be 15–30 minutes long.

What to Include in the Presentation

A. Explanation Part

Cover at least the following points. You are welcome to add more.

- What the AWS service is and what problem it solves
- How the service works, including architecture and main components
- Similar or alternative AWS services
- Advantages and limitations
- A practical, real-world use case
- Any insights, tips, or things you learned while working on it

B. Live Demo

- Include a live demo of the service.
- **Run the demo using:**
 - AWS Learner Lab, or
 - A personal AWS account (only if approved in advance).

The demo should support what you explained, not just show the console.
